

Foundations of Computer Science and Full-Stack Web Development

24-month Program

Holberton
MAURITIUS

Become a Software Engineer - For real

Our intensive program will first introduce you to the Foundations of computer science and Software Engineering, then specialize in what drives you.

The first three sprints of our program covers the Foundations of Computer Science and Software Engineering, including Linux, data structures, algorithms, low-level programming languages, high-level modern languages, databases, APIs, and DevOps.

Then, the last 3 sprints will be dedicated to Full-Stack Web Development.

What to Expect

1) No pre-course

Holberton School does not expect students to come in with previous software engineering experience (although if you do have experience, that's awesome too).

There is no **pre-course** work (that's why you are attending a school after all), but we do recommend that you read through The C Programming Language book by Kernighan and Ritchie or Programming in C by Stephen Kochan.

The goal of reading through the book is not to deeply understand all the concepts, but to familiarize yourself with key terminology and content.

2) Coursework

We are training you to be a full-stack software engineers in 12 months. The program will be intense.

There are no formal teachers or formal lectures. Students are learning by creating and we rely on peer-learning, collaboration, and industry-relevant curriculum to guide the way.

There is no competition here at Holberton School, rather students are helping each other towards their goals. Of course, there is also technical staff available to answer questions and extend support.

3) Professional development

We know that the skills to get a job are different from the skills to be good at a job. From week zero, we immerse students in professional growth and development via workshops, projects, meetups, and work simulations.

Whiteboarding, mock interviews, professional networking, and more begin as soon as students start the program so that they're confident and competent when the time comes to prove they're ready for the job.

4) Soft Skills

In today's tech world, it's not enough to be good at technical skills, you need to be a clear communicator as well.

We push our students to work on their public speaking skills, to publish blog posts to online tech communities and publications, and to speak at conferences and meetups.

This not only prepares students to be team players and clear communicators but creates amazing networking opportunities.

The great specificity in Holberton Mauritius is that our students will be train to develop their innovative leadership in software science, and entrepreneurship ,thanks to our partnership with **La Plage Factory**, the incubator located in Port-Louis.

5) Included in All Holberton School Sprints

Technical writing: It is an invaluable skill and an excellent way to articulate and share your knowledge.

Collaboration: It's key to successful business. You will learn project management, interpersonal communication, and team collaboration skills.

The Framework: it provides the structure, order, and balance necessary to maintain a productive peer learning environment and will help you succeed throughout your career.

Whiteboarding: it is an essential skill in the tech industry, both for effective planning and for excelling in tech interviews.

Mock Interviews: it is not enough fo you to know the answers to the questions; you need to be able to clearly communicate your thought processes and understanding

What You'll Learn

Foundations of Computer Science

This foundational knowledge of how computers and programming languages work will allow you to optimize and debug anything later on in your professional career. You will also begin working with algorithms and data structures which are essential foundations for great Software Engineers - the type that the best companies hire.

In the first sprint of foundations, you'll work in C and Unix programming, graphical programming, data structures, assembly language, and algorithms as well as reverse engineering and security protocols.

From there, you are introduced to higher-level languages, increasingly advanced algorithms, space and time complexity, database management, and Front-End programming. Using the latest technologies, you will begin to create a complete web application project that will span the rest of the foundation's sprints.

The final sprint of foundations emphasizes automation, scalability, and reliability, so that you are familiar with the infrastructure and best practices similar to those in tech powerhouses. Alongside a continuation in web development, you'll also advance in algorithmic understanding, technical writing, debugging, and project management.

To complete these 3 sprints of foundation, In Holberton Mauritius, each students must do an internship for 3 months with one of our partners.

Examples of Projects

- Write your own printf function
- Web stack debugging
- Clone a marketplace
- Code your own shell

Curriculum Foundations of Computer Science & Software Engineering

01

1st Sprint

- Git and command line editors
- Introduction to Bash
- C - first statements
- C - pointers
- C - recursion
- C - static library
- C - memory allocation
- C - preprocessor
- C - variadic functions
- C - bit manipulation
- C - file I/O
- Singly linked lists
- Create your own printf
- Create your own basic Shell

03

3rd Sprint

- Python - Object-relational mapping
- Python - Web framework
- Python - RESTful API
- Python - web scraping
- Javascript - first statements
- Javascript - objects
- Javascript - scopes and closures
- Javascript - web scraping
- Search algorithms
- SSH
- SSL certificate
- Web server
- Load balancer
- Firewall
- MySQL primary-replica
- Server monitoring
- Code deployment
- Postmortem
- Webstak debugging
- Portfolio project

02

2nd Sprint

- Python - first statements
- Python - import and modules
- Python - data structures
- Python - exceptions
- Python - classes
- Python - inheritance
- Python - file I/O
- Python - JSON serialization/deserialization
- HTML/CSS introduction
- SQL - basic queries
- SQL - join queries
- C - dynamic libraries
- C - makefiles
- Doubly linked lists
- Stack and Queues
- Hash tables
- Sorting algorithms
- Binary trees
- Bash - scripting
- Unix processes and signals
- Regex
- Network introduction

Specialization

Full-Stack Web Development

Become a Web Development Master

Streaming sites. Online stores. Government services. Our own website. All of these are powered by a combination of front-end and back-end web technologies. With our Full-Stack Web Development specialization, you will get an in depth education of the most popular web technologies and practical experience with developing useful web products.

The Full-Stack Web Development program is ideal for people who want to understand the whole picture of web development.

For the next three sprints, you will build upon Foundations by focusing on the most popular languages and technologies for web development, including Javascript, Python, React, Redis, MySQL, Node.js, SASS, and more. You will also learn best practices like user authentication, background jobs, and responsive design. Whether it's front-end, back-end, or full-stack engineering, this curriculum prepares you to create, maintain, and improve web applications and websites.

Typical job titles include: Full-Stack Web Developer, Front-End developer, and Back-End developer.

To complete these 3 sprints of specializations, In Holberton Mauritius, each students must do an internship for 3 months with one of our partners.

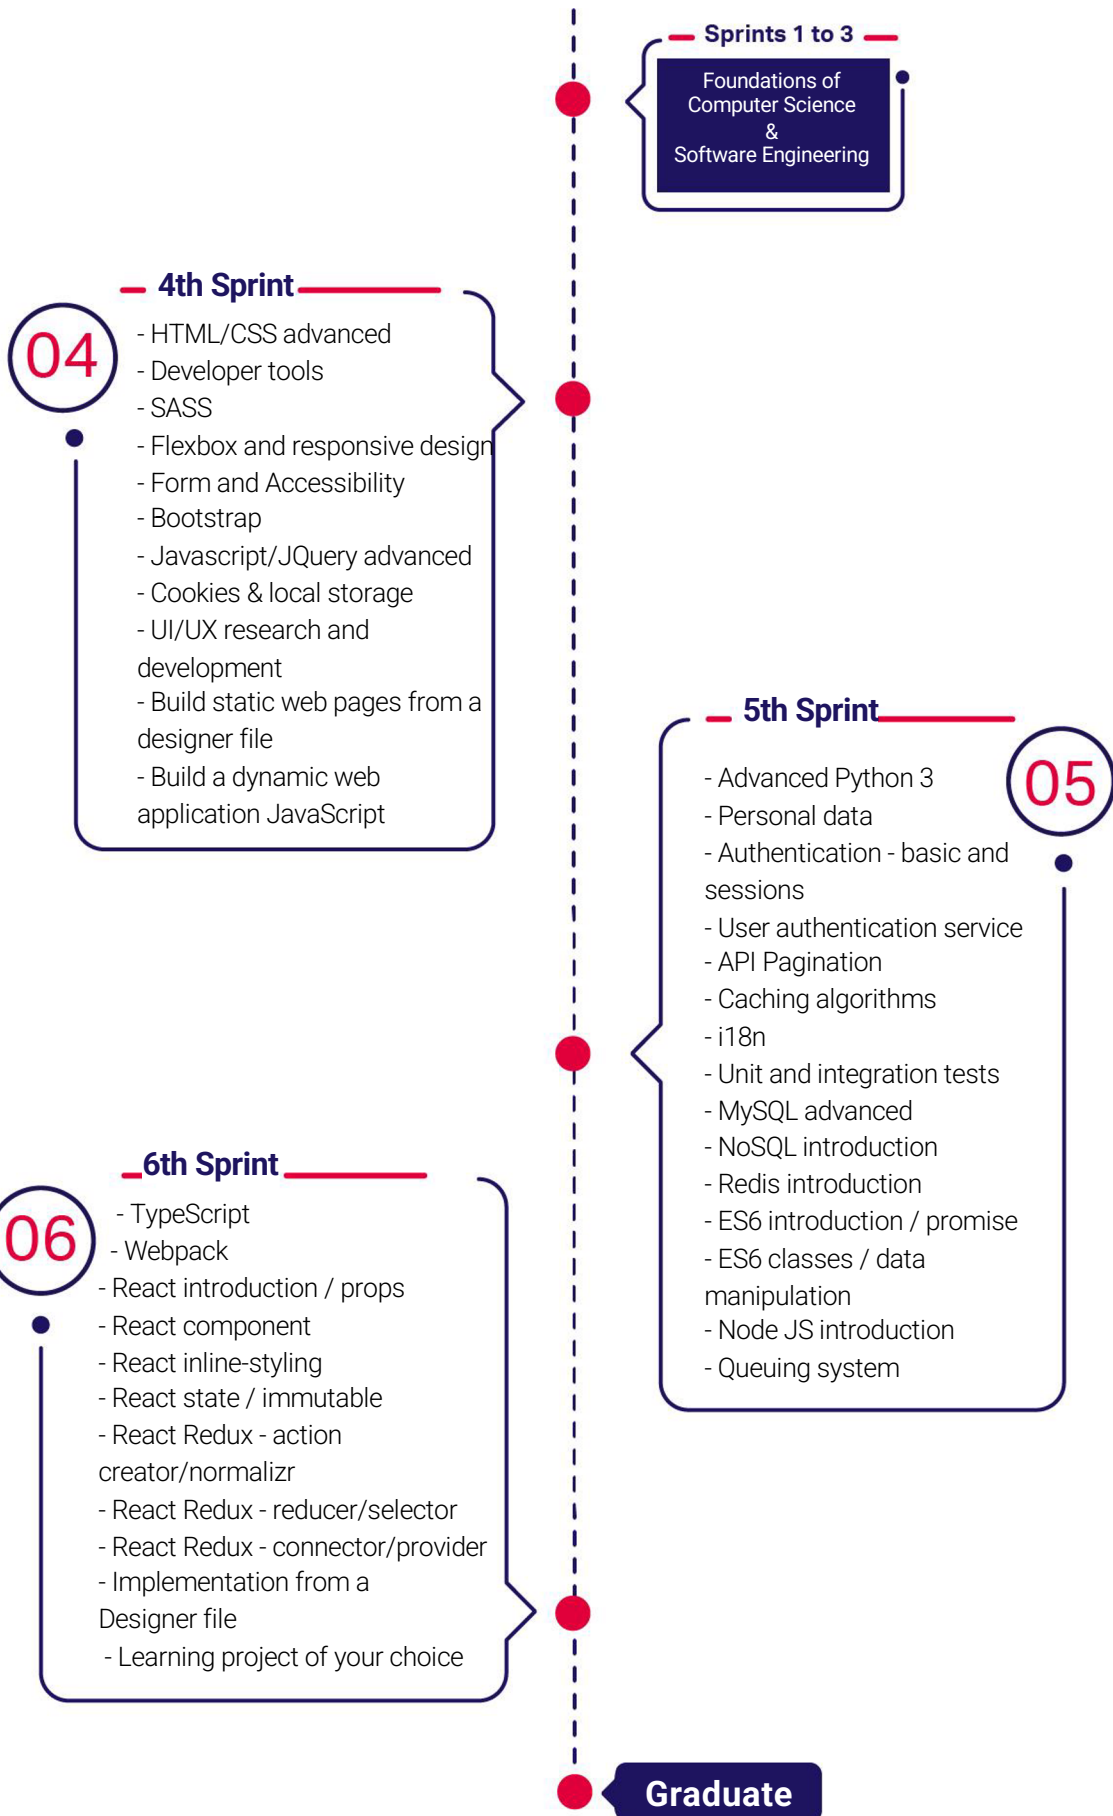

Examples of Projects

- Desktop and mobile version of websites
- MySQL performance debugging
- Cache from scratch
- Authentication service
- Background jobs system
- Student dashboard in React
- CRM dashboard in React

Curriculum Full-Stack Web Development

18-MONTH PROGRAM

The application Process

Our selection process is based only on talent and motivation. We don't care what degrees you may or may not have, if you have any previous programming experience, or your ability to pay. If you possess curiosity, determination, and drive to succeed, then we want you as a Holberton School student.

Our automated admissions process aims to remove human biases. It was created specifically to identify smart, motivated people and doesn't take into account previous education, work experience, gender, ethnicity, or age. There's also no cost to apply. – the only requirements are you must be 18 years old and have a GED or high school diploma.

Start your application today: <https://apply.holbertonschool.com/>

Flexible Tuition Options

We don't think that financial capacity should be a barrier. That's why at Holberton School (Mauritius), each case are studied very carefully.

We offer flexible tuition options that allow you to focus on school, not tuition.

- Private loan with our financial partners
- Government Schemes
- Scholarships

Lastly, we propose a win-win contract to our students: in return of a full commitment to follow the global formation (2 years), each student may sign a job contract with one of our private partners.
